

User Prompt: Under the warm glow of the showroom lights, a **2018 Indian Chieftain® Limited ABS** takes center stage, its vibrant red body gleaming against the polished wooden floor. The motorcycle's streamlined design is accentuated by prominent rear fenders and a black leather seat, which provides a striking contrast to the bold red paint. At the rear, a unique taillight featuring a **leaf-like emblem** is flanked by amber turn signals, with the **license plate bracket** mounted neatly below. The handlebars, equipped with chrome mirrors and controls, sweep outward to showcase the bike's classic cruiser styling. Surrounding the focal point are other motorcycles, including a black model with similar design elements, all arranged neatly throughout the showroom. Banners in the background—one prominently displaying an **"AM" logo**—provide context to the dealership setting in **Mineola, New York**. The overall composition highlights the motorcycle's luxurious build and attention to detail, capturing the essence of high-end craftsmanship in a realistic style that emphasizes its glossy surfaces and sophisticated design.

Step 1:

First, I will build the core of the entire scene: placing that **2018 Indian Chieftain® Limited ABS** motorcycle as the absolute focal point, allowing its vibrant red body to cast a delicate glow under the warm lights of the showroom, parked firmly on the polished wooden floor that reflects lights and shadows; the black leather seat must form a clear visual contrast with the red body. I will render this in a realistic style, ensuring that every detail highlights the premium texture of the bike's body.

Step 2:

Looking at the generated base image, the model, color, and basic texture of the main motorcycle are all correct; the warm lights and wooden floor of the showroom have also created the intended atmosphere, and other motorcycles, including a black one, can be seen blurred in the background. However, I noticed that the banner with the **"AM" logo** on the background wall is missing, which is a detail explicitly mentioned by the user. While keeping the red motorcycle in the foreground, the wooden floor, and the overall lighting and shadows unchanged, I need to precisely add a banner clearly displaying the "AM" logo to the background wall.

Step 3:

Now I am staring at the picture, meticulously checking every requirement: the subject is correct, the red body is vibrant enough, the warm lighting and polished floor of the showroom are fine, the contrast of the black seat is there, the rear fender is prominent, the handlebars with chrome mirrors and controls fit the cruiser style, and the black motorcycle and the "AM" banner in the background are both in place; the overall realistic texture is also very good. Wait, no—the **rear part of the bike** is completely invisible, the unique taillight with the **leaf-like emblem**, the amber turn signals on both sides, and the **license plate** bracket below that the user requested are not in the picture, and the location information for **Mineola, New York** is not reflected either. This is unacceptable; these are all critical details that were explicitly requested and must be added. I must completely change the shooting angle to a rear three-quarter view so that the taillight, turn signals, and license plate bracket can all be clearly displayed. I need to reference the previous main motorcycle and showroom environment, ensuring that from the new perspective, the motorcycle remains that same vibrant red, the black seat, warm-lit showroom, polished floor, and "AM" banner remain unchanged, and I must add the words "Mineola, NY" to the license plate, completing all missing details.

Step 4:

Now I am examining the adjusted image once more: the rear three-quarter perspective perfectly showcases every detail—the unique taillight with the leaf-like emblem is clearly visible, the amber turn signals on both sides and the license plate bracket below are all present, and the "Mineola, NY" lettering on the license plate is crystal clear.

Checking everything off one by one: the glossiness of the red body, the contrast of the black seat, the prominent rear fender, the dual exhaust design, and the chrome components on the handlebars all fully meet the requirements. The warm lighting of the showroom, the polished wooden floor, the other motorcycles in the background, and the "AM" banner have all been preserved. The overall realistic style and high-end texture are spot on; every detail precisely matches the original request. This is exactly the final effect I was looking for.
